During the second quarter of 2014 Connecticut dairy farmers continued to receive historically high milk prices amid steady but higher cost of producing milk. A new all-time high statistical uniform price of $25.36/cwt. was reached in April 2014, with declines in May and June. While the average price for the quarter remained just under below $25/cwt., the average cost of production remained stable at approximately $33/cwt. or an average minimum sustainable cost of production at approximately $27/cwt. Thus, the minimum sustainable cost of production still exceeds milk prices at the farm level supporting the continued need for payments to Connecticut dairy farmers for the second quarter of 2014 under Public Act 09-229.
