During the fourth quarter of 2014 Connecticut farm milk prices began a downward trend after they peaked in September 2014. The statistical uniform price averaged $22.44/cwt, almost $3/cwt lower than the average for the previous quarter. Meanwhile, the cost of production dropped to $33.93/cwt, about $2/cwt lower than the average for the previous quarter, primarily due to a decline in the cost of purchased feed. Consequently, the average shortfall of prices minus the minimum sustainable cost per cwt increased to $5.38/cwt, triggering the need for payments to Connecticut dairy farmers under Public Act 09-229. There has also been a strong downward trend in farm milk prices in early 2015 which is bound to result in even greater shortfalls in the coming months in spite of lower feed and fuel costs. These trends shall result in an increased financial stress on Connecticut dairy farmers absent Public Act 09-229.

### 2014 Connecticut Milk Cost of Production Estimates, Statistical Uniform Price, and Application of Public Act 09-229
